## **Boot Seal Kit fitting instructions**

Mark boot lid with tape at corner for alignment <

DO NOT STRETCH EXTRUSION WHEN GLUEING TO LID

1085mm

Your kit consists of:

6 x corners

1 length @ 1085mm

2 lengths @ 750mm

2 lengths @ 180mm

The corners are very flexible.

They have been made this way to allow them to stretch for the bends at the rear of the boot lid

which are not 90 deg.

750mm

The corners need to bonded to the extrusion with

the 406 glue included in your kit.

The glue should be refridgerated when not being used.

Allow it warm to room temperature before use. Hold the corner to the extrusion for 20 secs after applying 406 sparingly. One Drop is usually enough.

Have a cloth handy to clean any excess.

Gutter

Take care 406 is cyanoacylate adhesive and will bond skin. DO NOT GET IT IN YOUR EYES.

The completed rubber should be glued to the lid using contact adhesive.

Includes a 25mm x 3mm piece of closed cell fo am for the rear edge of the bootlid.

180mm

180mm

Please note that the kit has been supplied this way in order to keep it affordable.

Should you have any questions please email australia@fccoc.org.uk

A MSDS can be downloaded from https://www.facebook.com/groups/CCapriandclassicsww/ Although this MSDS is for Loctite 406 the adhesive supplied should be treated in the same way.
